Snow began during the late night hours, before sunrise on Tuesday the 13th. A 2 to 4 inch snow accumulation was common by 1000E on the 13th.

A south to north transition to freezing rain or rain occurred during the late morning hours. In Perry County, the freezing rain was more persistent into Tuesday night from New Lexington on north, toward Somerset, Glenford, Crooksville, and Mt Perry. Ice accretion was at least a half inch across northern Perry County. Some tree branches did snap. Power outages affected some 4,000 customers in northern Perry County, with over 1,000 still without electricity on the 15th. In Morgan County, the freezing rain was mainly north of McConnelsville, toward Deavertown, Eagleport, and Bristol. Ice accumulated around a quarter of an inch there. Colder air charged back into Morgan and Perry Counties before dawn on the 14th, changing the lingering precipitation to fluffy dry snow showers or flurries.
